Abstract of DE19503778

The housing is produced as a plastic moulding and is open at the top. A pressed metal grating is embedded into the base section and leads (3, 3a) formed for connection purposes. An extension is formed as an external connecting plug (4). Vertical pin projections (6, 7) extend into the housing recess and locate in holes formed in a mounted circuit board (9). Contact clamps (11) fit over the pins and are soldered into position. The circuit board has a number of surface mounted devices.
